Research Profile

Environmental economist specializing in quantitative analysis of global production and consumption systems, with a focus on multi-regional input–output (MRIO) modelling, supply-chain analysis, and environmental footprint assessment.

My research develops data-intensive and reproducible models to evaluate how global trade networks, food systems, and consumption patterns shape environmental outcomes and economic impacts. I analyze large-scale, multi-country datasets to assess the distributional and systemic effects of shocks such as price volatility, trade disruptions, and dietary transitions, with direct relevance to policy design.

My current work extends toward risk and resilience analysis of interconnected energy–food systems, linking supply-chain structures to environmental sustainability and economic vulnerability.

Research Interests

Multi-Regional Input–Output (MRIO) Modelling and Supply-Chain Analysis

Economic and Environmental Impacts of Food Systems

Global Trade Networks and Systemic Risk

Environmental Footprint and Life Cycle Assessment

Sustainability Transitions and Consumption-Based Emissions

Policy-Oriented Quantitative Analysis

Education

Ph.D. in Economics
Graduate School of Economics, Waseda University, Tokyo, Japan
Research focus: Environmental Footprints, Sustainable Consumption, and Distributional Impacts in Emerging Economies
2020 – 2026

M.Sc. in Finance
Queen's University Belfast, Northern Ireland, UK
2012 – 2013

B.A. in Finance
Academy of Finance, Hanoi, Vietnam
2007 – 2011

Scholarships

- SDGs Global Leader Program (FY2020), Japan International Cooperation Agency (JICA), *2020 – 2023*

Research Outputs

1. Dang, D. V. (2026). Beyond the environment: Sustainable consumption amid poverty and inequality. Insight from a developing economy. *Ecological Economics*, *243*, 108932. https://doi.org/https://doi.org/10.1016/j.ecolecon.2026.108932.
2. Dang, D. V. The Feasibility of Sustainable Dietary Transitions in Developing Countries under Nutritional, Environmental, and Acceptability Constraints. *Manuscript under review.*
3. Dang, D. V. & Kondo, Y. Household carbon footprint in Vietnam: Do the rich present less carbon-intensive consumption? *Manuscript under review.*

Quantitative & Technical Skills

- Multi-regional input–output (MRIO) modelling and global supply-chain analysis
- Environmentally Extended Input–Output (EEIO) modelling
- Large-scale multi-country data processing and harmonisation
- Consumption-based accounting and environmental footprint analysis (GHG, land, water)
- Econometric analysis and causal inference
- Integration of household survey data with global economic datasets
- Programming: MATLAB, R, Python, Stata
- Reproducible and high-dimensional data workflows

Academic Experience

- Teaching Assistant, *Econometrics I*, Graduate School of Economics, Waseda University (2021 – 2023)
- Research Assistant, Graduate School of Asia-Pacific Studies, Waseda University (2022 – 2024)
- Research Assistant, Graduate School of Economics, Waseda University (2021 – 2022)
- Lecturer, *Public Finance*, Academy of Finance, Vietnam (2014 – 2020)

Conference Presentations

- 3RINCs – International Scientific Conference on Material Cycles and Waste Management, Kyoto, Japan (2023)
- Biennial International Conference on EcoBalance, Fukuoka, Japan (2022)
- PAPAIOS – International Conference on Economic Structures (ICES), Yokohama, Japan (2022)
