

DUY V. DANG

(Updated: Feb 2026)

Contact Information

Graduate School of Economics, Waseda University, Shinjuku, Japan

Email: dangvandung@fuji.waseda.jp

Research Profile

Environmental economist with expertise in quantitative sustainability assessment, environmental footprint modelling, and policy-relevant climate analysis. My research integrates multi-regional economic data, environmental accounts, and scenario modelling to evaluate energy, food, and resource transitions under climate policy constraints. I have experience conducting structured literature-based research and synthesizing large bodies of quantitative evidence to inform sustainability and policy discussions.

Research Interests

Energy Systems and Climate Policy

Environmental and Resource Economics

Integrated Economy–Environment Modelling

Sustainability Transitions

Environmental Footprint & Distributional Analysis

Policy and Assessment Experience

- Conducted large-scale literature reviews on sustainability transitions and environmental policy
 - Developed structured scenario assessments under resource and emissions constraints
 - Produced policy-relevant quantitative analyses for developing country contexts
 - Experience synthesizing interdisciplinary research across economics and environmental science
-

Education

Ph.D. in Economics (expected June 2026)

Graduate School of Economics, Waseda University, Tokyo, Japan

Research focus: Environmental Footprints, Sustainable Consumption, and Distributional Impacts in Emerging Economies

September 2020 – June 2026 (tentative)

M.Sc. in Finance

Queen's University Belfast, Northern Ireland, UK

2012 – 2013

B.A. in Finance

Academy of Finance, Hanoi, Vietnam

2007 – 2011

Scholarships

- SDGs Global Leader Program (FY2020), Japan International Cooperation Agency (JICA), *2020 – 2023*
-

Research Outputs

1. Dang, D. V. (2026). Beyond the environment: Sustainable consumption amid poverty and inequality. Insight from a developing economy. *Ecological Economics*, 243, 108932.
<https://doi.org/https://doi.org/10.1016/j.ecolecon.2026.108932>
→ Examines how poverty and inequality shape the distribution of environmental footprints and the social feasibility of low-carbon consumption.
 2. Dang, D. V. How Much Change Is Needed? Mapping Global EAT–Lancet Diet Transitions. *Manuscript submitted to Environmental Science & Technology, under peer review.*
→ Analyses behavioural feasibility and distributional implications of global dietary transition pathways.
 3. Dang, D. V. & Kondo, Y. Household carbon footprint in Vietnam: Do the rich present less carbon-intensive consumption? *Manuscript submitted.*
→ Investigates inequality and consumption-based carbon emissions in a fast-growing emerging economy.
-

Quantitative & Technical Skills

- Environmentally Extended Input–Output (EEIO) modelling
 - Multi-regional trade and consumption-based accounting
 - Environmental footprint assessment (GHG, land, water use)
 - Econometric analysis and causal inference
 - Large-scale dataset integration (household surveys + global IO tables)
 - Programming: R, Stata, Matlab, Python
 - Reproducible research workflows
-

Academic Experience

- Teaching Assistant, *Econometrics I*, Graduate School of Economics, Waseda University (2021 – 2023)
 - Research Assistant, Graduate School of Asia-Pacific Studies, Waseda University (2022 – 2024)
 - Research Assistant, Graduate School of Economics, Waseda University (2021 – 2022)
 - Lecturer, *Public Finance*, Academy of Finance, Vietnam (2015 – 2020)
-

Conference Presentations

- 3RINCs – International Scientific Conference on Material Cycles and Waste Management, Kyoto, Japan (2023)
- Biennial International Conference on EcoBalance, Fukuoka, Japan (2022)
- PAPAIOS – International Conference on Economic Structures (ICES), Yokohama, Japan (2022)
